

The goal of the app is to allow the user to become more organized and have easier access to work related opportunities and this app has the main goal of trying to help people find a job based on their experiences..

#### Feature List:

- Has a calendar feature to display important dates and descriptions
- Has a timeline feature that does the same as the calendar but in a different format
- Has a job search assistant feature that helps to user to find job opportunities
- Built in example templates and advice for how to create a resume
- A feature that allows the user to rate the app and give us feedback
- Dates are color coded on the calendar/timeline and matched to a key to better organize different tasks and goals.
- The job search assistant feature has a feature that allows it to filter jobs based off of the experience of the user.

#### First solution sketch

②

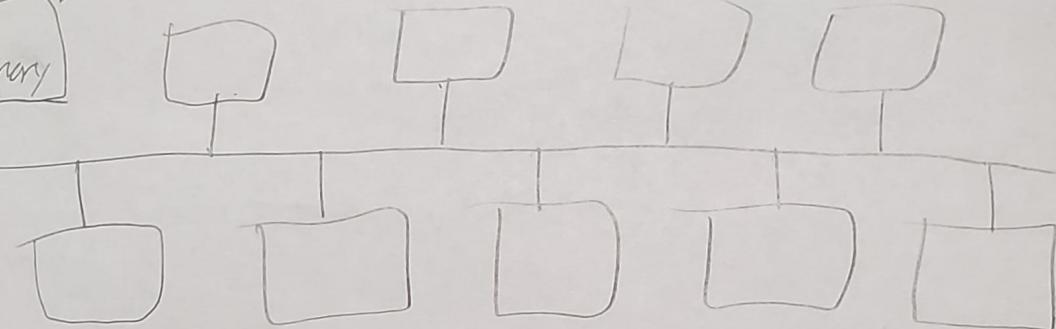

Calendar

Time Line

Back

Time	summary	edit
More detailed description	delete	

Time  
Summary

Time	summary
description	

Key:  College related  Job related

Personal

### ③ Notes

The sketch of the timeline was trying to display that the boxes hold information about dates and by click on it you can get a more detailed description of the event and edit it or delete. I wanted to convey that there is an add button to create new events. In the sketch there is a button called Calendar in which is basically the same thing as timeline but in a different format.

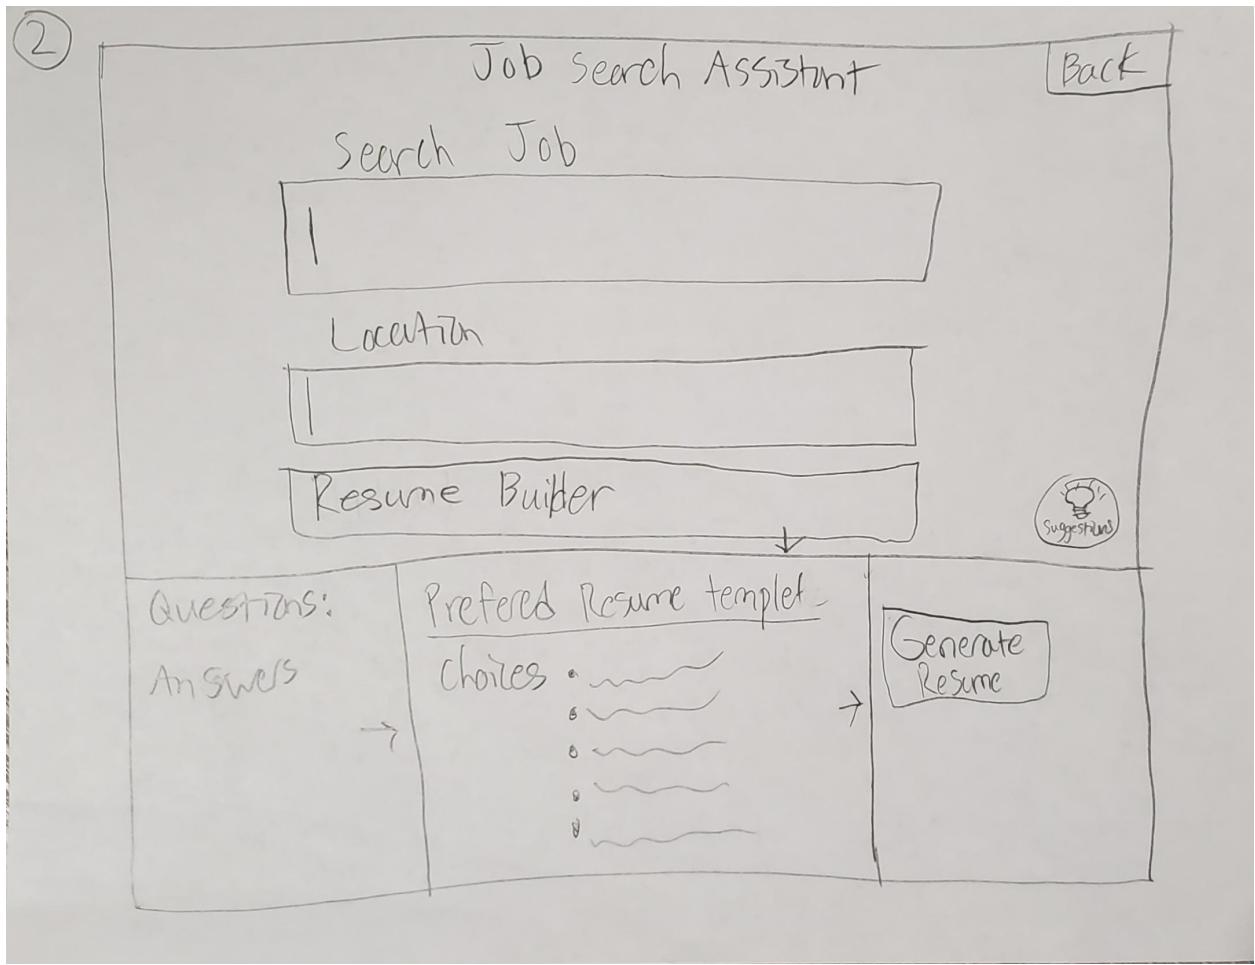

Second Solution Sketch

## ① Job search assistant

Job [ ]  
Location [ ]  
Resume [ ]

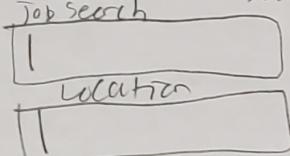

### Description

This feature would allow the user to search for jobs via a job and a location search bar. The feature has a resume builder that prompts the user questions in which the answers help the assistant build a resume for the user and use that information to find potential jobs for the user via the  button.

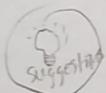

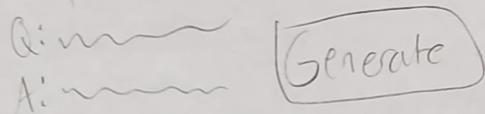

### (3) Notes

My design template was inspired by a couple of Job Searching sites in which they have the simple Job search bar and location.

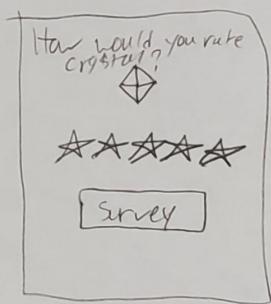

I also looked at some websites for resume building in which they use a question and answer format then after that create a resume for you in which I decided to put those two aspects together in the Job assistant feature

Based on the questions asked via the resume builder the suggestions auto search for jobs that match their experience

### Third Solution Sketch

## ① Feedback/Rate

### Description

The main purpose of this feature is to help improve the app. There would be a one out of five star rating system as well as a survey to help us meet the needs of the user finding a job.

②

How would you Rate Crystal?

(Bock)

Survey

Questions about how we could improve.

Answers~~~~~

what did you like about the app

### ③ Notes

#### Survey

The Survey that the users can take will help us a lot in terms of getting constructive feedback to continue to make the app better. I tried to demonstrate this with the arrow from survey to these boxes with questions and answers. The stars on the sketch will help us determine how well the app holds up to the users expectations.
